IRIS VALVE FOR SILO

光圈隔膜阀

Iris diaphragm valve IR-Series

IR 系列光圈隔膜阀

虹膜阀主要被用于卸载散装物料袋，阀门通过扎紧物料袋的颈部而且到切断物料流动的作用。虹膜阀在输送爆炸性的物料和脆性物料时表现良好，但是它不适合处理高流动性、磨损性物料和需要频繁开启闭合的系统中。

The iris valve is mainly used for unloading bulk material bags. The valve is used to cut off the flow of materials by tightening the neck of the material bag. The iris valve performs well when conveying explosive materials and brittle materials, but it is not suitable for processing high-fluidity, abrasive materials and systems that require frequent opening and closing.

性能-特性 *Performance & Technical Features - Benefits*

- 光圈式开合,流通口径大,无阻卡,卸料速度快;
 - 开度可调,任意调整落料流量;
 - 用于袋装物料卸料时不接触物料,避免交叉污染;
 - 多种动力驱动选择;
 - 有卫生级配置,符合GMP及FDA要求.
- Aperture opening and closing, large circulation path, no obstruction, fast unloading speed;
 - Opening can be adjusted and blanking flow can be adjusted arbitrarily.
 - For unloading bagged materials without contact with materials, avoid cross-contamination;
 - Multiple power drive options;
 - Health-grade configuration, in line with GMP and FDA requirements
